

End Grain Sealer

Contains no or minimal solvents Waterborne brush/spray quality for professional use

Beneral DRYWOOD End Grain Sealer is based on a combination of waterborne binders and is suited for use as sealer (brush/spray quality) for end grains. It is tested according to SKH publication 04-01 d. d 2009-03-20 DRYWOOD End Grain Sealer has excellent sealing properties of end grains and is very easy to apply in high layer thicknesses. The product has high penetration into the wood and dries very quickly. The product has good adhesion, high blocking properties and is good paintable. The product has high durability, excellent elasticity and good UV blocking properties. For mor end grain protection (exterior wood constructions), after sanding the first layer, a second layer can be applied. DRYWOOD End Grain Sealer Premium ED is a special quality to apply one layer of the product by spraying directly on a pile of wood panels. Sclours and packaging DRYWOOD End Grain Sealer is available in transparent and white colour. The product is available in 1, 2,5 and 20 liter packaging. Shelf-life is at least 12 monts in unopened and closed packaging and at frost-free storage. Density ca. 1,02 - 1,06 kg/l (depending the colour) voc content approx. 35 Vol% (depending the colour) voc content approx. 0,3 m2/l at 300 g/m ² VPPLCATION DRYWOOD End Grain Sealer can be applied by brushing, spraying or rolling on a clean surface, sanded and dry, free of dust and grease. Drying time depends on layerthickness, temperature, relative humidity and ventilation. According to SKH publicatie 04- 01 d. 2009-03-20 a minimal amount of 600 g/m ² end gain of wood or piywood should be applied in one layer or in two layers for each layer 200-300 g/m2 (with minim	PRODUCT DESCRIF
